G900 GSM Terminal Wireless Local Loop

The **GSM Terminal** is a device that enables any user to save money on calls from fixed phones to GSM Networks. Generally speaking mobile-to-mobile calls are cheaper than fixed-to-mobile calls. You can imagine the GSM Terminal like a "mobile phone", through all company calls go to mobile networks.

Having one Sim card installed in the GSM Gateway (GSM Router, FCT) you can make mobile-to-mobile calls instead of fixed-to-mobile ones. Obviously, these devices are much more sophisticated and provide a lot of useful features.

Highlights:

- Dual Band 900/1800 Mhz
- Easy to Use; No programming needed
- Save as much as 70% on your telephone bills

Features:

Maximum Efficiency at Minimum Cost

Saving on Communication Expenses >>

G900 GSM Terminal allow you to benefit from low business tariffs, by pass your landline carrier, eliminate interconnection fees and take advantage of your special business-to -mobile airtime charges.

Call Back, Call Through >>

Allow remote employees to place calls through your organizational phone system at lower long-distance rates, as if they were in the office.

Bringing Your Business To You >>

If your customer can't reach you on the first try, chances are he'll take his business elsewhere. GSM Terminal make "missed call" a thing of the past by allowing you to divert your calls to wherever you choose.

Business Continuity>>

In case of failure in the ground line network, all calls will pass through the gateway to the cellular network. Or if you have problems with your mobile connection your calls are handled and processed through the PSTN network.
